What is the LASTRADA App doing?

The LASTRADA App offers you selected functions from LASTRADA on your mobile device. It supports additional functions for the managing directors, the construction site, the office and the laboratory.

Sample Management

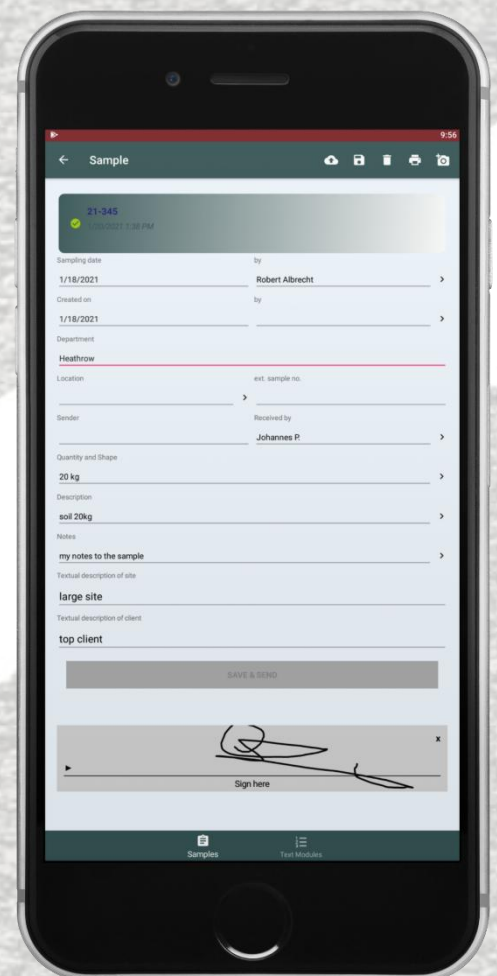

This module brings selected function from the LASTRADA sample management to your device. You can completely capture any type of sample. The data registration takes place offline, even without an internet connection.

You can make the paper sample forms superfluous by documenting the sampling with your mobile device and sending it directly to the LASTRADA database.

In the sample receipt in LASTRADA you can monitor which samples are on the way or can be picked up.

Functions of Sample Management

- All data is recorded on the construction site
- You can scan QR codes to generate samples and pre-allocate data
- Geotag sample location
- Print the sample label and the sample information sheet at the construction side, also with QR code
- The mobile printer is connected via Bluetooth
- In the lab only scan the QR code of the incoming sample
- Attach images
- Sign the sample
- Option: select a contract

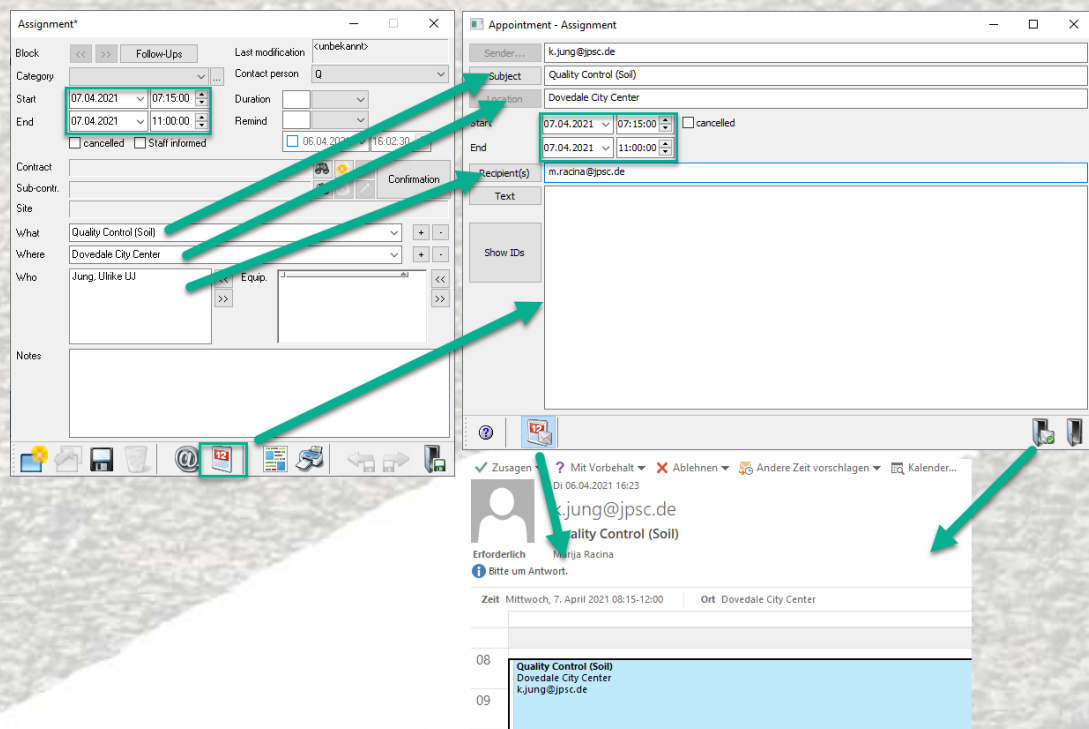

our Advantages

- ✓ Paper is completely unnecessary and you also get full transparency of all samples.
- ✓ All data is recorded where it originates when the samples are taken on the construction side.
- ✓ There is no double work, errors are minimized
- ✓ The status of the sample is clear at all times.

Field Assignments

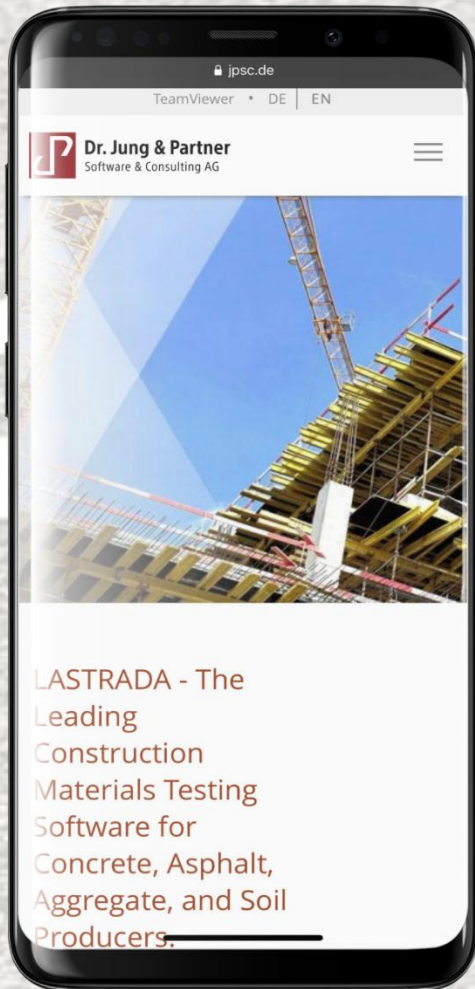

- Plan the assignments for construction site workers, vehicles and equipment from a convenient overview
- Couple construction site workers, vehicles and devices
- Plan in a clear view for each day, week or month
- Link every assignment with a contract and use the master data already stored
- Send assignments by E-Mail. The assignments appear automatically in the calendar (e.g. Outlook) on the mobile device

How to get LASTRADA App?

Write us an email and check out our Website!
